

Community Program Performance Report

Program Performance and Financial Reporting | 2025

Prepared by Berlan Binenggar

Portfolio Demonstration Notice: This report uses synthetic data created solely for portfolio and analytical demonstration purposes. It does not contain, represent, or imply access to actual Department of Communities data.

1. Executive Summary

Purpose. This report provides a summary of participant outcomes, completion rates, satisfaction, and financial performance for three programs in 2025. The data is synthetic and was created for this portfolio project.

Overall result. The dataset contains 100 participant records. The overall completion rate was 79.0%, average satisfaction was 3.15/5, and average outcome improvement was 12.59 points. Total budget was \$1.37M compared with \$1.34M actual expenditure, producing a favourable variance of \$28.87K.

KPI	2025 Result
Participants	100
Completion rate	79.0%
Average satisfaction	3.15 / 5
Average outcome improvement	12.59 points
Total budget	\$1,365,270
Actual expenditure	\$1,336,396
Budget variance	\$28,874 favourable

2. Program Performance

Program	Participants	Completion	Avg. satisfaction	Avg. outcome change
Community Support	35	82.9%	3.14	12.91
Family Support	26	73.1%	3.08	12.69
Youth Support	39	79.5%	3.21	12.23

Key observations. Community Support recorded the highest annual completion rate (82.9%) and the highest average outcome improvement (12.91 points). Youth Support had the largest participant volume (39) and the highest average satisfaction (3.21/5). Family Support recorded a 73.1% annual completion rate, with average outcome improvement of 12.69 points.

Quarterly pattern. Across all programs, completion was highest in Q2 (85.7%) and fell to 61.9% in Q4. In contrast, average satisfaction increased from 2.86 in Q1 to 3.57 in Q4, while average outcome improvement increased from 11.86 to 14.10 points. These movements are descriptive only. Further information would be needed to understand the reasons behind them.

3. Financial Performance

Program	Budget	Actual	Variance	Position
Community Support	\$441,676	\$422,751	\$18,925	Favourable
Family Support	\$456,671	\$446,523	\$10,148	Favourable
Youth Support	\$466,923	\$467,122	\$-199	Unfavourable

Financial result. Overall expenditure was \$1,336,396 against a budget of \$1,365,270, leaving a favourable variance of \$28,874. Community Support contributed a favourable annual variance of \$18,925 and Family Support \$10,148. Youth Support was close to budget overall, with an unfavourable variance of \$199.

Quarter-level exceptions. The largest unfavourable program-quarter variance was Youth Support Q2 (-\$11,978), followed by Community Support Q3 (-\$9,076) and Family Support Q3 (-\$6,049). These exceptions are suitable candidates for drill-down review in a real reporting environment.

4. Management Considerations

- **Review the Q4 completion rate.** The completion rate decreased to 61.9% in Q4, while satisfaction and outcome improvement increased. It would be useful to check the participant data and program activities for this quarter to better understand this difference.
- **Check the larger budget variances.** Youth Support Q2, Community Support Q3, and Family Support Q3 had the largest negative budget variances. These results should be reviewed to understand what contributed to their higher expenditure.
- **Monitor results by program and quarter.** Looking at each program separately can make it easier to identify changes in completion, satisfaction, outcomes, and expenditure over time.
- **Check the data before making conclusions.** In a real workplace, unusual results should be checked against the source data and discussed with the relevant team before they are used to support decisions.

5. Methodology

The reporting workflow was designed as an end-to-end data analysis demonstration. Synthetic participant and financial records were prepared and validated in Python, structured for relational analysis, queried and aggregated for reporting, and presented through Power BI. Annual program and quarterly metrics in this report were calculated from the supplied management reporting dataset. Completion, satisfaction, and outcome-change annual figures were weighted by participant counts; financial values were summed across quarters.

Measure	Interpretation
Completion rate	Percentage of participant records marked as completed within the relevant reporting group.
Average satisfaction	Mean satisfaction score for participant records in the reporting group.
Average outcome change	Mean difference between post- and pre-program outcome measures.
Budget variance	Program budget minus actual expenditure; positive values are favourable (under budget), negative values are unfavourable (over budget).

6. Limitations

- The data used in this project is synthetic. It was created for portfolio purposes and does not represent any real organization, government program, service, or participant.
- The dataset is relatively small, with 100 participant records and 12 quarterly financial records. A real dataset would likely be much larger and involve more detailed data management and quality checks.
- The analysis focuses on describing the results and identifying patterns in the data. It does not attempt to determine why the changes occurred or whether the programs directly caused the outcomes.
- The financial analysis only covers budget, actual expenditures, and budget variances. Other financial information that may be used in a real organization is outside the scope of this project.

7. Conclusion

This 2025 Performance Report shows an overall completion rate of 79.0%, average satisfaction of 3.15 out of 5, and a favourable budget variance of \$28,874. The results also show a lower completion rate in Q4, while satisfaction and outcome improvement increased later in the year. Some quarterly budget variances were also identified and would need further review. In a real workplace, these results would be checked against the source data and discussed with the relevant team before making any decisions.
